

PROTECTIVE COATINGS

BURKE SHIELD 244

A penetrating, weatherproofing sealer.

Burke Shield 244 protects new or existing concrete, masonry, stone, clay tile or brick surfaces from damage due to intrusion of water, sea water, water borne contaminants or airborne pollutants. Typical applications include parking stations, bridges, retaining walls, stadiums, natural stone building facades, airport runways, wharves and piers. Burke Shield produces a clear, water repellent membrane which prevents contaminants from penetrating the concrete and attacking the steel reinforcement.

This clear, siloxane-based product has a history of good performance and is supported by independent testing laboratories.

- Can be applied over broad temperature range.
- Does not require an alkali as a host, so it can be applied to new or old concrete.
